DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5-13-04 has been entered.
2. Amendment to claim 1 has been entered.
3. New claim 11 has been entered.
4. Claims 1-11 are pending.
5. The 132 declaration by Michael Vitek has been considered.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

7. Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention for reasons of record set forth in the previous office action of 2-14-2003 and 11-13-03.
8. Claims 1-11 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a hemizygous transgenic mouse whose germ cells and somatic cells contain (i) an inactive endogenous mouse inducible nitric oxide synthase gene, and (ii) a transgene encoding the human inducible nitric oxide

Art Unit: 1632

synthase gene, said transgene comprising all regulatory elements of the human nitric oxide synthase gene necessary for a human pattern of expression of said transgene in said transgenic mouse, wherein lipopolysacchhalide (LPS) inducers induce essentially no increase in iNOS activity in phagocytic cells of said mouse as measured by nitric oxide release as compared to a corresponding wild-type mouse, does not reasonably provide enablement for other claimed embodiments for reasons of record set forth in the office actions of 2-14-2003 and 11-13-03. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Response to Arguments

Applicant's arguments filed 5-13-04 have been fully considered but they are not persuasive. Applicants have amended claim 1 to define "human pattern of expression". However, the amendment recites characteristics of the human pattern of expression, not the expression of the mouse. Recitation of the limitation "wherein lipopolysacchhalide (LPS) inducers induce essentially no increase in iNOS activity in phagocytic cells of said mouse as measured by nitric oxide release as compared to a corresponding wild-type mouse" is suggested.

9. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

10. Claims 1-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention for reasons of record set forth in the previous office action of 2-14-2003.

Claim 1 is vague and indefinite because it is not clear as to whether the limitation "said human pattern of expression characterized in that lipopolysacchhalide (LPS) inducers induce essentially no increase in iNOS activity in phagocytic cells of

Art Unit: 1632

said mouse as measured by nitric oxide release as compared to the corresponding wild-type mouse" describes the mouse or the human pattern of expression.

11. The 103 rejection of claims 1 and 2 has been withdrawn in view of the amendment to claim 1.

12. The listing of references in the specification (for example, see pages 11 and 12 of the specification) is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

13. No claim is allowed.
